59	List all customers in Best Customers segment	There is 1 customer in the Best Customers segment: - C004 : RFM = 555 (top-tier), 16 orders, \$7,130 total spending, last purchased 4 days ago . ✓ This is your highest-value, most eng	✓ PASS
60	Who has spent more than 000?	It looks like your query is incomplete — you wrote "spent more than 000", but the amount is missing (e.g., \$500, \$1,000, etc.). Could you please clarify the spending threshold? For example: -	✓ PASS
61	Show me the highest value customers	Here are your highest value customers, ranked by total spending: 1. C004 - Best Customers (555) - \$7,130 spent across 16 orders, last purchased 4 days ago 2. C002 - Potential Loyalist (345) -	✓ PASS
62	Which customers buy most frequently?	The most frequent buyers are: 1. C004 — <i>Best Customers</i> (RFM: 555) — 16 orders , \$7,130 spent, last purchased 4 days ago 2. C001 — <i>Potential Loyalist</i> (RFM: 453) — *12 orders	✓ PASS

63	Who are the churned best customers?		✓ PASS
64	List customers who haven't purchased in 30+ days	None of the listed customers meet the "haven't purchased in 30+ days" criteria — all have recencyDays ≤ 24. The most dormant is C007 (Hibernating, 24 days), but still under 30. 🔍 To	✓ PASS
65	Show me all customers sorted by total spending	Here are all 8 customers sorted by total spending (highest first): / Customer / Segment / RFM / Orders / Spending / Recency (days) / /-----/-----/-----/-----/-----	✓ PASS
66	What if C003 made 10 purchases?	If C003 increased their order count from 3 to 10 purchases , while keeping spending (\$135 avg/order) and recency (35 days since last purchase) unchanged, their RFM score would improve from **12	✓ PASS
67	If C008 bought something today, would their segment change?	Yes — C008's segment would change if they purchased today: - ✓ Current segment: <i>Lost Cheap Customers</i> (111) - 🎯 New segment: <i>Customers Needing Attention</i> (511) - 📬 **Cha	✓ PASS
68	What if C005 increased their spending to 00 per order?	It looks like the monetary value you entered for customer C005 is "00", which appears to be incomplete or invalid (e.g., \$0 or missing digits). To run a meaningful <i>What-If</i> simulation, we need a real	✓ PASS
69	Simulate C002 making 5 more orders	✓ Corrected simulation: If C002 makes 5 more orders (total orders → 15), their RFM score improves from 345 → 355 , but they remain in the Potential Loyalist segment , as this s	✓ PASS
70	What happens to C001 if they don't buy for 90 days?	If customer C001 doesn't make another purchase for 90 days , their RFM profile changes significantly: - Current: 453 → Potential Loyalist (strong frequency & spending, very recen	✓ PASS
71	If C003 spent 00 per order, what segment would they be?	✓ Confirmed: If C003's average spending drops to \$0 per order , their RFM score remains 121 , and they stay in the Hibernating Customers segment. Why? - Monetary score is based on *re	✓ PASS
72	What if C007 ordered 15 times?	If C007 increased their order count from 5 to 15 , while keeping spending (\$255) and recency (24 days) unchanged, their RFM score would improve from 222 → 252 , and their segment would shi	✓ PASS
73	Simulate C008 becoming a daily shopper	✓ Simulation Result for C008: - Current segment: <i>Lost Cheap Customers</i> (111) - After becoming a daily shopper: → Low-spending Active Loyal Customers (551) 🔍 **Key	✓ PASS
74	What changes would move C006 to Loyal Customers?	To move C006 from <i>High-spending New Customers</i> to Loyal Customers , the following changes are required: - ✓ Recency: Already optimal — purchased today (0 days ago). - + **Freq	✓ PASS
75	How can C003 become a Potential Loyalist?	Here's the precise path for C003 to become a Potential Loyalist: ✓ Achievable? Yes ♦ Required changes: - Recency: Purchase within the next 0–2 days (i.e., *immine	✓ PASS

76	What if C005 had recency of 0 days?	If customer C005 had a recency of 0 days (i.e., purchased today), their RFM score would improve from 333 → 533 , moving their <i>Recency</i> score from 3 to 5 — but their **segment remains	✓ PASS
77	Simulate doubling C002's order count	Doubling C002's order count from 10 to 14 moves their RFM score from 345 → 355 , but they remain in the Potential Loyalist segment. Key insights: - Their Frequency score improved from 4 →	✓ PASS
78	What if C004 reduced their spending by half?	Even with spending cut in half (from \$446 → \$223 avg/order), C004 remains in the Best Customers segment (555) — no segment change. ✓ Why? Their Recency (4 days) and Frequency (16 orders)	✓ PASS
79	If C001 doubled their frequency, what changes?	Great — here's the impact of doubling C001's order frequency (from 12 → 24): - ✓ RFM score changes: 453 → 455 - ✓ Segment upgrades: Potential Loyalist → **Loyal Cu	✓ PASS
80	What would it take for C008 to reach Best Customers?	Thanks for the confirmation — C008 is indeed a 111 (Lost Cheap) : - 🕒 Recency: 84 days (score = 1) - 📦 Frequency: 1 order (score = 1) - 💰 Monetary: \$50/order (score = 1) To reach	✓ PASS
81	Simulate C007 with 12 orders and 00 avg spend	The simulation for C007 shows a dramatic shift: - Before: Hibernating Customers (RFM 222) — inactive, low spend, low frequency - After: Low-spending Active Loyal Customers (RFM 541)	✓ PASS
82	What if C006's recency was 1 day?	If C006's recency increased from 0 to 1 day (i.e., their last purchase shifts from <i>today</i> to <i>1 day ago</i>), their RFM score remains 514 , and they stay in the High-spending New Customers segm	✓ PASS
83	How to move C003 to Loyal Customers?		✓ PASS
84	What changes would upgrade C005's segment?	Customer C005 is currently in the Potential Loyalist segment (RFM score: 333), meaning they're moderately engaged — purchased 6 times, most recently 14 days ago, and spend ~\$105 per order. To	✓ PASS
85	If C002 came back today, what segment?	If C002 came back today , their RFM score would improve from 345 → 545 , moving them from Potential Loyalist to Loyal Customers — a high-value, active segment. ✓ Key impact: - R	✓ PASS
86	Simulate C008 with recency=0, frequency=5, monetary=150	Simulating C008 with updated behavior (recency = 0 days, frequency = 5 orders, monetary = \$150) results in a significant positive shift : - ✓ Segment change: From **Lost Cheap Customers	✓ PASS
87	What if all customers bought one more time?		✓ PASS
88	Can C007 reach Best Customers?		✓ PASS

89	What minimal changes upgrade C003?	The suggestion shows that moving C003 from Hibernating (121) → Potential Loyalist (≥333) would require <i>very large</i> changes: - Recency: 0 days (i.e., purchase <i>today</i>), - Orders: j	✓ PASS
90	How to turn C008 into a valuable customer?	Processing loop limit reached. Please try a simpler query.	✓ PASS
91	Which customers are at risk of churning?	Based on the analysis, I've identified 1 customer at risk of churning: C002 . - Segment: Potential Loyalist (RFM: 345) - Recency: 22 days since last purchase - Orders: 10 total ord	✓ PASS
92	Show me the churn risk analysis		✓ PASS
93	Who is most likely to churn?	The system identified 1 at-risk customer , with moderate urgency : - Customer ID: C002 - Current Segment: <i>Potential Loyalist</i> (RFM = 345) - Recency: 22 days since last purcha	✓ PASS
94	Which high-value customers are slipping away?	Only 1 customer is currently flagged as <i>at-risk</i> — C002 , classified as Potential Loyalist (345) with: - Recency: 22 days since last purchase - 10 orders, \$2,005 average spending per o	✓ PASS
95	Are there any critical churn risks?	There is 1 at-risk customer , but the urgency level is only <i>moderate</i> , not critical. Customer C002 is in the <i>Potential Loyalist</i> segment (RFM 345): they've placed 10 orders, spent \$2,005 on	✓ PASS
